INTELLEX® PC

Features

ESRI Integration

INTELLEX PC now offers the capability to export data directly into ArcMap® MXD files. This capability allows you to take advantage of the easy to use functionality and data provided by INTELLEX directly in ArcMap® applications.

INTELLEX Mapping Graphics with Layer Control Menu

Create a custom map display of multiple data types in a specific lease block and surrounding area, then inspect the underlying database information by generating reports directly from the on-screen map display. Once your map is displayed, click on an item to generate an on-screen report to inspect and/or print as a PDF.

Comprehensive Data Editors allow users to enter and edit proprietary company databases

Although INTELLEX PC comes with its own excellent suite of data, some companies may wish to enter their own data from in-house databases. The INTELLEX PC editors provide editors for wells, leases, and other databases for this purpose.

Graphic Output options include full size map plots and desktop printing

Print the map display on a desktop printer, plot it to scale or save it as a CGM file to include in your presentation. INTELLEX PC allows you to set all plotting parameters to your favorite drafting standards.

List Reports provide tabs for associated data and access to log images

The integrated aspect of INTELLEX databases means easy access to related data for each data record. Lease and well list reports also provide access to the EG Logs database with an integrated log viewer.
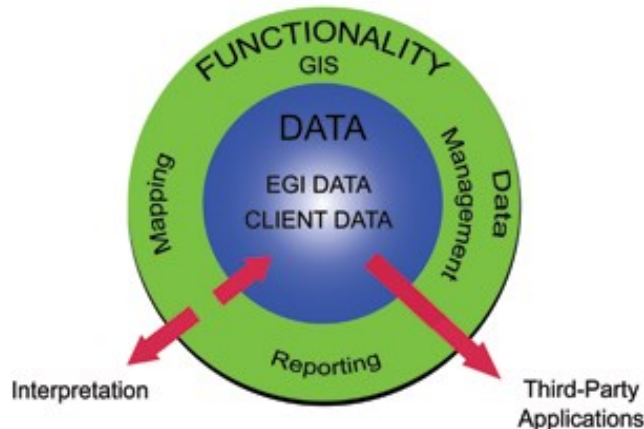

Data

INTELLEX PC comes complete with the Energy Graphics proprietary Gulf of Mexico database. These databases are continuously updated by our highly experienced Database Department.

Updates are provided to users on a monthly basis to assure them of having the most current data available.

Additional EGI Data

Directional Survey Data, Texas State Waters Well Data, and Louisiana State Well Data are available for license from Energy Graphics at additional cost.

Client-Owned Data

Your company's own proprietary and third-party data, including logs, wells, directional surveys, and drilling histories, can also be loaded and accessed with INTELLEX PC.

Data Retrieval

With the INTELLEX PC layers menu, you can choose which datasets to use from the EGI database and from your own proprietary and third-party datasets. Select or reject data from multiple datasets in your preferred order of priority. Use the list report lease format to select and pull individual data attributes from all lease related datasets to create your own spreadsheet for sorting and analysis.

Data Types

The Energy Graphics Gulf of Mexico Database includes the most comprehensive set of data available. This provides users with the ability to see a complete picture of an area without having to switch back and forth between different software and hardware.

Leases

- Bid Histories
- Lease Histories
- Lease Production
- MMS Serial Registry Remarks
- Operating Rights
- Designated Operator
- Statistics
- Plans
- Prospects

Platforms

- Time/Depth Data (Velocities)

Wells

- Location Information
- MMS Paleo
- Production Volumes
- Completion Zones
- APDs
- FieldBase™ field data

Pipelines

- Including all segment as-built data.
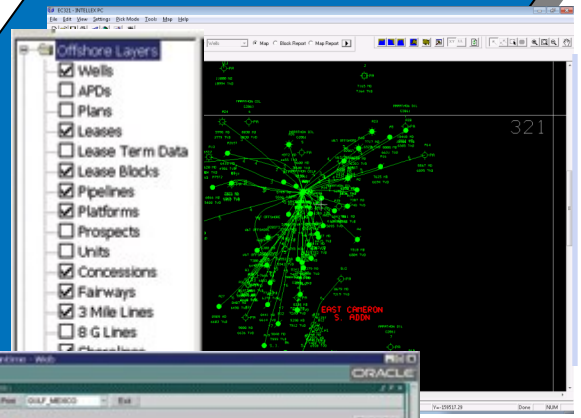

Locations

- Industry 2D/3D

Culture

- Lease Blocks
- API Concessions
- Shoreline
- 3 Mile & 8G Lines
- Water Depths
- Fairways

Optional
(license purchase required)

- Directional Surveys
- Texas State Waters Wells
- OOSA Scout Group/EG Group Wells

More information available to you from one software tool.
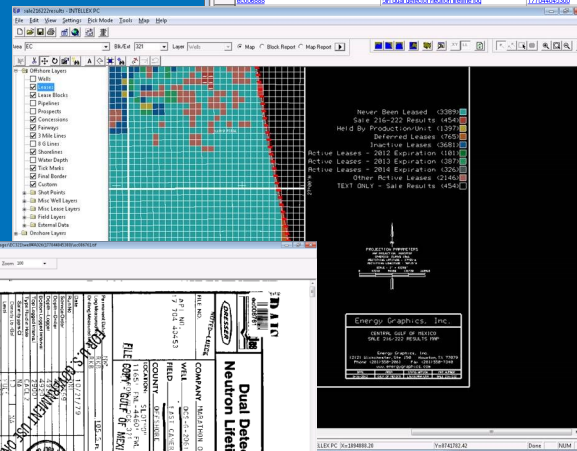

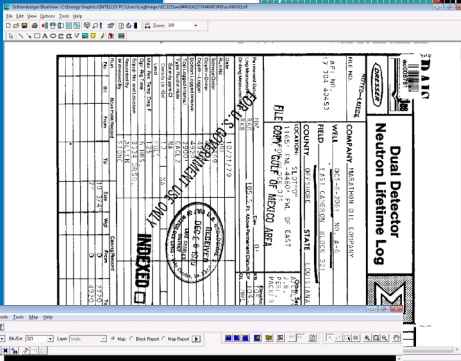

Add or remove data with the Data Types Menu.
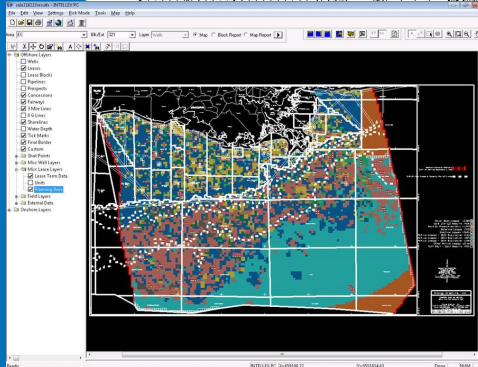

Data Editors

Master/Detail List Reports

Custom Final borders

Browse and download MMS logs directly from your INTELLEX reports or displays.

Create custom MMS Gulf of Mexico lease sales maps or a regional map.

ArcMap® Integration
